

 **turquoise**
concept

The image is a vertical composition showcasing a modern interior design. In the foreground, a wooden table with a hexagonal metal mesh top is visible. Above it, a chandelier with butterfly-shaped lights hangs from the ceiling. In the background, a large abstract sculpture made of wood and metal is displayed. The text "The new age designs with unmatched quality of craftsmanship" is overlaid on the left side of the image.

The

designs with
unmatched
quality of
craftsmanship

crystal clear as glass

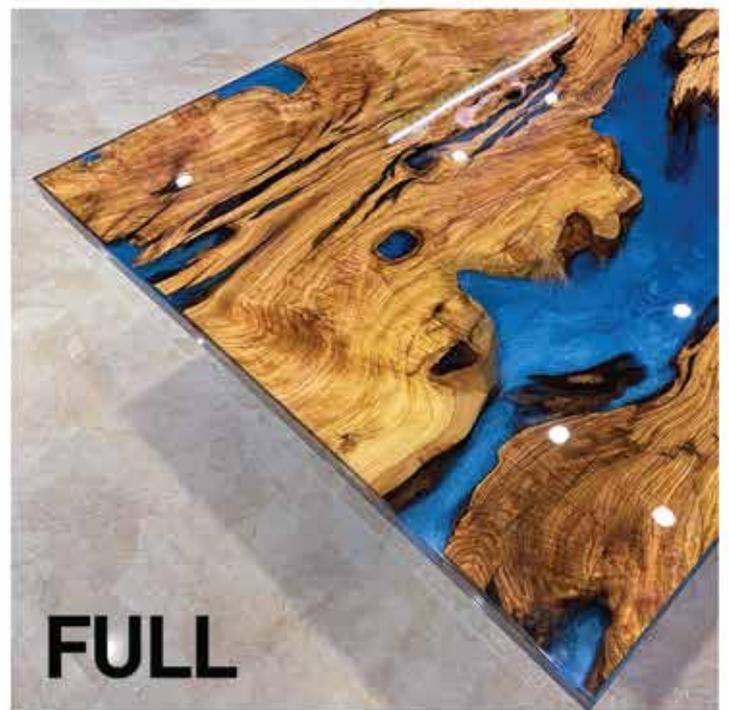

Check out how it looks when epoxy and wood expertly crafted.

The most important feature of designs which are produced by using epoxy resin is its quality and formula.

In our designs, we use special products that are extra resistant to yellowing, provide maximum surface hardness, and have a high level of transparency and glossiness.

Our special polishing formulas and techniques are developed on the result of our brand's R&D and keeping up-to-date production techniques based on developing technology over the years, the most accurate techniques and the best materials have been determined to make the epoxy look clear like glass and bright like crystal, not like plastic.

That is the reason of the unique transparency and the unbeatable glossiness of our products.

Wood surfaces in brushed table designs are not covered with epoxy.

It is a model preferred by those who want to feel the texture of wood in areas where wood is located.

Wooden surfaces have a more matte appearance in this model compared to epoxy areas.

A specially produced wood oil from linseed is applied to wooden surfaces on brushed tables.

In order to preserve the vitality of wooden surfaces on the first day, it is necessary to apply wood oil at regular intervals.

Wood oil application is easily applied and wiped.

Table owners can easily do this process.

Can be produced with all color options.

In full tables, the entire table is covered with transparent epoxy.

It's a preferred model that epoxy has a glossy, glassy appearance and shows that the wood logs have been trapped inside more deeply.

In this model, the wood can't be felt.

Full tables does not require maintenance at regular intervals like brimful (brushed) tables.

Full tables have a completely glossy appearance. Since wooden surfaces are covered with epoxy, they have the alive and bright look provided by epoxy, and the surface patterns become more visible and vital.

It is resistant to scratches in daily use as long as it doesn't receive severe and hard impacts.

Can be produced with all color options.

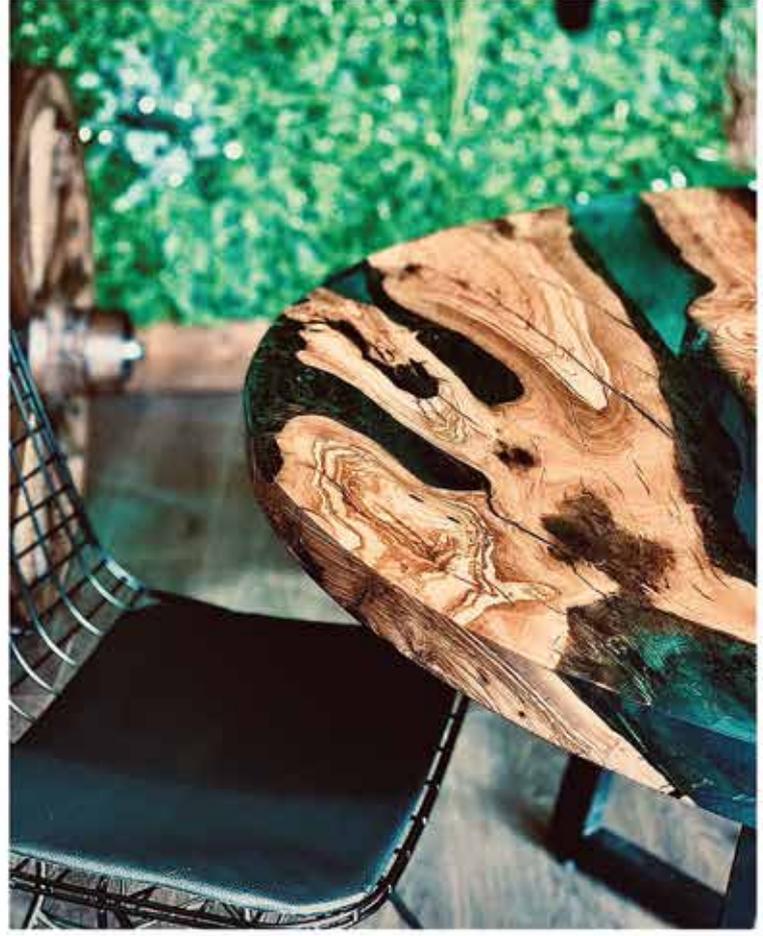

transparent tables

colorless transparent tables where woods are trapped in epoxy with all their details.
