

sshhh **5.1** sound

SPECIAL SOLUTION FOR HOTELS

It has been said that the sshhh 5.1 Sound is the world's smallest concert hall. It can be used in any space where people wish to escape a noisy environment while they work or listen to music via their own tablet or smartphone, for instance, without disturbing others. The structure and surface materials of the chair offer effective soundproofing, both blocking out external noise and ensuring that the voice of the user cannot be heard from outside.
